

# What is Perpetual Pavement?

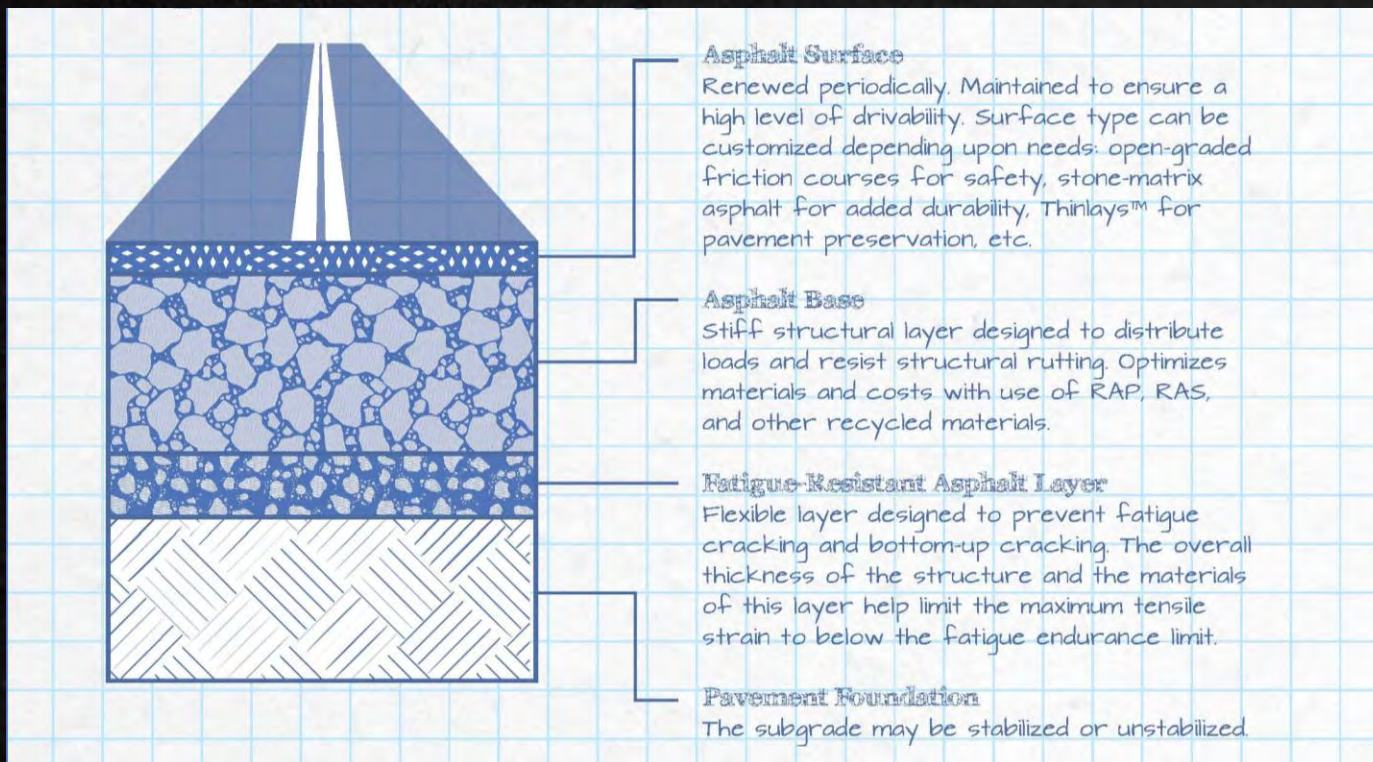

An asphalt Perpetual Pavement is designed and built to ensure that the structure lasts virtually indefinitely. Routine maintenance is simply a matter of periodically milling (about every 12 to 20 years) the surface for recycling, followed by placement of a new, smooth new overlay. The result is a long-lasting pavement that:

- Serves the traveling public well
- Reduces the money needed for maintenance
- Conserves raw materials

# Asphalt Pavement Alliance

Presented by the APA since 2001, Perpetual Pavement Award: By Performance honors asphalt pavements that were designed and built with outstanding care and exceptional quality.

# Perpetual Pavement Award: By Performance Criteria

- Is at least 35 years old
- Has not suffered a structural failure
- Has an average interval between resurfacing of no less than 13 years
